

District-Wide Connectivity

SCSConnect provides a flexible combination of Ethernet, Fiber and wireless Microwave (carrier class) at up to 200 Mbps net throughput at the most competitive price in the industry. SCSConnect incorporates Motorola, Ceregon using OFDM technologies together with unique proprietary protocols to ensure unmatched robustness and resiliency in the fiber line and wireless market. Extremely simple to install and maintain, SCSConnect operates flawlessly in

extreme temperatures and nLOS (non Line of Site). SCSConnect makes excellent sense for enterprises, education, health and public safety institutions that require high-capacity connectivity at a cost-effective price. With SCSConnect solutions organizations can connect buildings across large radius of up to 120 Km, and meet these organizations' objectives for high-capacity, reliability and security.
